EXPORTS...

*... their importance to
the United States economy*

Exports play an important role in our economy and in the increasingly interdependent world economy. The United States is the world's largest exporter—currently selling \$200 billion of U.S. goods abroad—and is the world's largest economy. With 5 percent of the world's population, our country produces 24 percent of the world's industrial goods.

Exporting provides a broader marketing base for U.S. firms and is considerably more important than many Americans realize. Exports currently account for 5 million jobs in the United States. On average, 25,000 jobs are generated per \$1 billion of U.S. merchandise exports.

Many jobs depend on exports

Employment generated by exports is much greater than the number actually employed in producing the final products shipped abroad. Exports create a large demand for employment that spreads throughout our economy. This includes all the jobs needed to produce goods and services supplied to export producers, the jobs needed by the export producers to produce exports, and the jobs needed to move products to our ports or borders for transport to other countries.

Most of the export-related jobs are in manufacturing and services. According to the latest estimates, 49 percent of the jobs are in manufacturing, 37 percent in services, and 14 percent in production of nonmanufactured goods. The importance of export employment varies among the industries. About one out of every eight Americans currently employed in manufacturing is dependent on exports of manufactured goods. About one out of every six jobs producing nonmanufactured goods and one out of 24 jobs in services are export-related.

Exports affect production and employment in all industries, not just in a few major export industries. For example, while the primary metals industries directly export about \$6 billion of their products annually, an additional \$21 billion of steel and other metals are exported in the form of American-made computers, aircraft, tractors, and other manufactured goods.

Exports are of great importance to America's farmers as well. They account for \$1 of every \$4 of farm sales. Likewise, many jobs in the coal mining and mineral industries, as well as a considerable number in the fishing industry, are dependent on overseas

sales. Exports also support employment in the trucking, rail transport, insurance, and other service industries.

Exports essential

But the basic importance of exports is that they are the principal means by which America pays for its purchases from foreign countries. The United States imports proportionately far less than other major countries, but imports have become increasingly important to the American standard of living—and they have to be paid for. The other major industrial nations generally cover the cost of the goods they import by their exports. Merchandise exports and imports each account for an average of about 20 percent of the gross national product in that group of countries. American exports, however, were only 5.9 percent of GNP in 1983, while the ratio of imports to GNP stood at 7.8 percent. This gap between exports and imports is the trade deficit, which amounted to \$57.6 billion in 1983.

The strength of our exports means a great deal to America. Exports are important to all the 50 states, and each state plays a significant role in meeting the need to export more. This report helps explain that role and shows the significance of exports in relation to employment and production.

Pennsylvania Export Highlights

Pennsylvania's exports of manufactured goods totaled \$8.1 billion in 1981, up 72 percent from the 1977 level. They rose much faster than production.

An estimated 89,600 jobs in Pennsylvania were directly related to producing manufactured exports in 1981. About 81,800 additional jobs were required to produce materials and parts for incorporation in products exported from the 50 states. Thus, about 171,400 jobs in Pennsylvania were dependent on exports of manufactured goods—about one of every eight manufacturing jobs in the state.

Exports of coal were valued at \$634 million in 1981, more than twice the 1977 value.

Pennsylvania's share of U.S. agricultural exports totaled \$246 million in FY 1982, a 79 percent increase from the FY 1977 value.

Manufactured exports grew rapidly

Pennsylvania's exports of manufactures totaled \$8.1 billion in 1981, up 72 percent from the 1977 value. The state ranked eighth nationally in sales of these products to foreign countries, and its exports accounted for 4.9 percent of the U.S. total. Shipments from Pennsylvania firms advanced by 44 percent from 1977 to 1981, a much slower pace than the growth in exports.

Nonelectric machinery, transportation equipment, primary metals and electric equipment, were Pennsylvania's largest exports, accounting for 62 percent of the 1981 total. In addition, substantial amounts of chemicals, instruments, and fabricated metals were shipped to foreign buyers.

Pennsylvania ranked first nationally as an exporter of primary metals products; third in printing/publishing; fourth in instruments, apparel/textile products and lumber/wood products; fifth in textile mill products, furniture/fixtures, petroleum/coal products, and fabricated metals; sixth in electric equipment; seventh in transportation equipment; and eighth in nonelectric machinery.

Exports of nonelectric machinery totaled \$2 billion in 1981, accounting for one-fifth of the state's production and an estimated 24,300 jobs in that industry. The increase in exports from 1977 to 1981 contributed over one-fifth of the increase in production in this Pennsylvania industry.

Rising 150 percent in value since 1977, Pennsylvania's transportation equipment exports reached \$1.3 billion in 1981. The state's production advanced

by 61 percent. The rise in exports accounted for more than one-fourth of that growth. About 12,200 workers were employed in this Pennsylvania industry in jobs directly related to exports.

Exports of primary metals products expanded strongly to \$844 million by 1981, an increase of 64 percent from 1977. Exports grew faster than production and contributed 5 percent of the output increase. These exports provided 6,400 jobs, 3.9 percent of this industry's employment in the state.

Electric equipment shipments overseas rose to \$830 million in 1981, an increase of 48 percent since 1977. About 11,700 jobs, or 12 percent of employment in the industry, were directly related to exports. Altogether, exports from the electric equipment industry accounted for 12 percent of the state's production in 1981.

The state's economy benefits from goods produced not only for direct shipment to foreign destinations but also from those for ultimate export through other states. Tables 6 to 8 show Pennsylvania's export figures for manufactures including the output of supplying establishments that furnish parts and materials to manufacturers producing goods in final form for export. Such indirect exports are particularly important in industries whose products require further processing such as primary metals, fabricated metal products, and chemicals, and also in those industries whose products constitute components and parts for assembly into machinery, electric equipment, and transportation equipment.

The Census Bureau has estimated that the full
(continued on back cover)

Explanatory Notes

State export statistics presented in this report are estimates, in contrast to national export statistics, which are compiled from export documents prepared at the time goods leave the country. This note considers the reasons for, and consequences of, that difference.

Export estimates for each state are needed in order to measure the relative impact throughout our nation of changes in goods sold abroad. National export data are compiled each month in detail by types of goods sold and summarized in large commodity aggregates and overall totals—but in order to measure exports by each state of origin, which is not identified in shippers' export documents, special studies are necessary.

This report—one in a series of reports for each state—brings together state export estimates from studies by various U.S. Government agencies on manufactured goods, agricultural products, fishery products, and selected minerals. Overall totals for all goods exported from each state are not shown since these studies differ in methodology, frequency, export valuation, and U.S. geographic coverage, and the manufactures and agricultural studies somewhat overlap the products covered.

Manufactured Exports in this report relate to manufacturers as defined in the Standard Industrial Classification (SIC) and include manufactured food, mineral fuel products, fats, oils, firearms, and ammunition not typically part of the Standard International Trade Classification (SITC) definition of manufactures. For the United States as a whole, exports of these additional products totaled \$28.5 billion in 1981. Exports, normally valued at the port of exportation, are adjusted to f.o.b. plant values to make accurate comparisons with production (shipments) data.

The state estimates for manufactured goods are based on surveys of manufacturers conducted by the Industry Division of the Bureau of the Census. These studies are for selected years; cover the continental United States, Alaska, and Hawaii; and present data classified by the 20 major SIC industry groups (2-digit). Tables 1 to 3 show

the value of state exports and state production, and the number of workers employed in manufacturing plants producing the finished goods for direct shipment to foreign destinations.

State economies also benefit from manufactured goods produced for ultimate export through other states, and from jobs related to manufactured exports which are generated in nonmanufacturing industries. In the table below, percentages show the full impact of export-related manufactures on state employment. Tables 6 to 8 show the percent of production and the value of state export-related manufactures—direct exports plus indirect exports or the value of materials and parts incorporated in products exported from elsewhere in the nation—and the number of state export-related workers employed in manufacturing plants producing these goods. Table 8 also shows the total number of workers related to manufactured exports—in manufacturing plus the number in nonmanufacturing industries supporting manufactured exports by supplying materials or services such as forwarding, warehousing, transport, and other foreign trade-related services.

Agricultural Exports relate to food products other than those from marine sources, unmanufactured tobacco, and other agricultural products simply processed such as fibers, raw hides and skins, fats and oils, wine and beverages other than distilled types.

The state estimates for agricultural exports are from studies prepared by the U.S. Department of Agriculture. Exports reflect shares in national exports according to each state's production and sales data. Export values were obtained by multiplying each state's share of farm production by commodity times the total export value for each of the respective commodities. These annual studies are for fiscal years ending September 30 and for all states except Alaska, and show data classified by 18 commodity groups. Tables 4 and 5 show the value of state exports and the percent of farm sales.

Other Exports—Fishery products, various minerals, and fuel export estimates shown in the Highlights on page 1 for selected states are from studies prepared by the National Oceanic and Atmospheric Administration (NOAA), the U.S. Department of Interior, and the U.S. Department of Energy, respectively. Exports generally reflect shares in national exports according to state production.

Annual Exports and Employment Related to Manufactured Exports

	Manufactured exports		Manufacturing employment		Total employment, including nonmanufacturing employment	
	(million dollars)	(thousands)	Percent of manufacturing employment	(thousands)	Percent of civilian employment

TABLE 2

Pennsylvania Growth in Manufactured Exports

- In 1981, Pennsylvania's manufactured exports totaled \$8.1 billion, over one and a half times the 1977 value.
- Nearly two-thirds the increase stemmed from growth in nonelectric machinery, transportation equipment, primary metals, and electric equipment exports.

Industry group	Export value (million dollars)					Exports	Pro- duc- tion	Export increase as percent of production increase 1977-81

* Exports reflect shares in national exports according to each state's production. ¹ Commercial sales plus net Commodity Credit Corporation loans and purchases under price support programs. ² Includes exports that were not apportioned among states. ³ Less than \$500,000. ⁴ Not available. ⁵ Less than \$100,000. -- Not applicable.

TABLE 6

Pennsylvania Manufactured Production, Export-Related Manufactures and Employment, 1981

- About 1 out of 8 Pennsylvania jobs in manufacturing are due to exports.

- Four industries—nonelectric machinery, primary metals, electric and transportation equipment—accounted for 55 percent of Pennsylvania's export-related jobs in manufacturing.

Industry group	Production (million dollars)	Export-related manufactures	Export related as percent of production	Employment for export-related manufactures (thousands)	Employment for export related as percent of total employment
Total	115,182	15,485	13.4	171.4	13.2
Primary metal industries	21,667	3,966	18.3	30.2	18.3
Machinery, except electric	10,331	2,588	25.0	32.4	23.7
Transportation equipment	7,578	1,473	19.4	13.8	18.5
Electric and electronic equipment	6,891	1,301	18.8	18.6	18.5
Chemicals and allied products	7,655	1,217	15.8	5.9	14.2
Fabricated metal products	7,944	958	12.0	12.6	12.0
Petroleum and coal products	11,234	715	6.3	0.6	5.7
Food and kindred products	12,905	602	4.6	3.7	4.1
Instruments and related products	2,635	592	22.4	8.8	21.4
Paper and allied products	4,979	496	9.9	3.6	9.3
Stone, clay, and glass products	3,695	418	11.3	5.5	10.9
Rubber and plastic products	2,739	269	9.8	3.3	9.6
Lumber and wood products	1,425	217	15.2	3.3	15.6
Textile mill products	2,195	187	8.5	3.4	8.7
Printing and publishing	4,444	147	3.2	2.7	3.5
Apparel and textile products	3,362	127	3.7	5.5	4.7
Misc. manufacturing industries	1,515	119	7.8	1.2	6.0
Tobacco manufactures	184	36	19.4	0.4	12.9
Furniture and fixtures	1,152	33	2.8	0.4	2.0
Leather and leather products	651	24	3.7	0.2	1.2

TABLE 7

Pennsylvania Growth in Export-Related Manufactures

- The 73 percent growth in the value of export-related manufactures from 1977 to 1981 was much faster than the rate of expansion in production.
- Almost one-third of the increase in transportation equipment production and about one-fourth of the rise in primary metals, nonelectric machinery and electric equipment output was generated by growth in export-related manufactures.

Industry group	Export-related manufactures (million dollars)		Percent increase from 1977 to 1981		Export-related increase as percent of production increase 1977-81
	1977	1981	Export related	Production	
Total	8,955	15,485	73	44	18
Primary metal industries	2,521	3,966	57	40	23
Machinery, except electric	1,589	2,588	63	55	27
Transportation equipment	612	1,473	141	61	30
Electric and electronic equipment	899	1,301	45	35	23
Chemicals and allied products	759	1,217	60	44	19
Fabricated metal products	629	958	52	32	17
Petroleum and coal products	176	715	305	102	9
Food and kindred products	249	602	141	36	10
Instruments and related products	351	592	69	55	26

Stone, clay, and glass products	225	418	86	33	21
Rubber and plastic products	184	269	46	28	14
Lumber and wood products	61	217	256	39	39
Textile mill products	110	187	70	17	25
Printing and publishing	98	147	50	48	3
Apparel and textile products	69	127	84	21	10
Misc. manufacturing industries	135	119	-12	8	0
Tobacco manufactures	16	36	116	29	47
Furniture and fixtures	16	33	115	46	5
Leather and leather products	14	24	75	22	9

TABLE 8

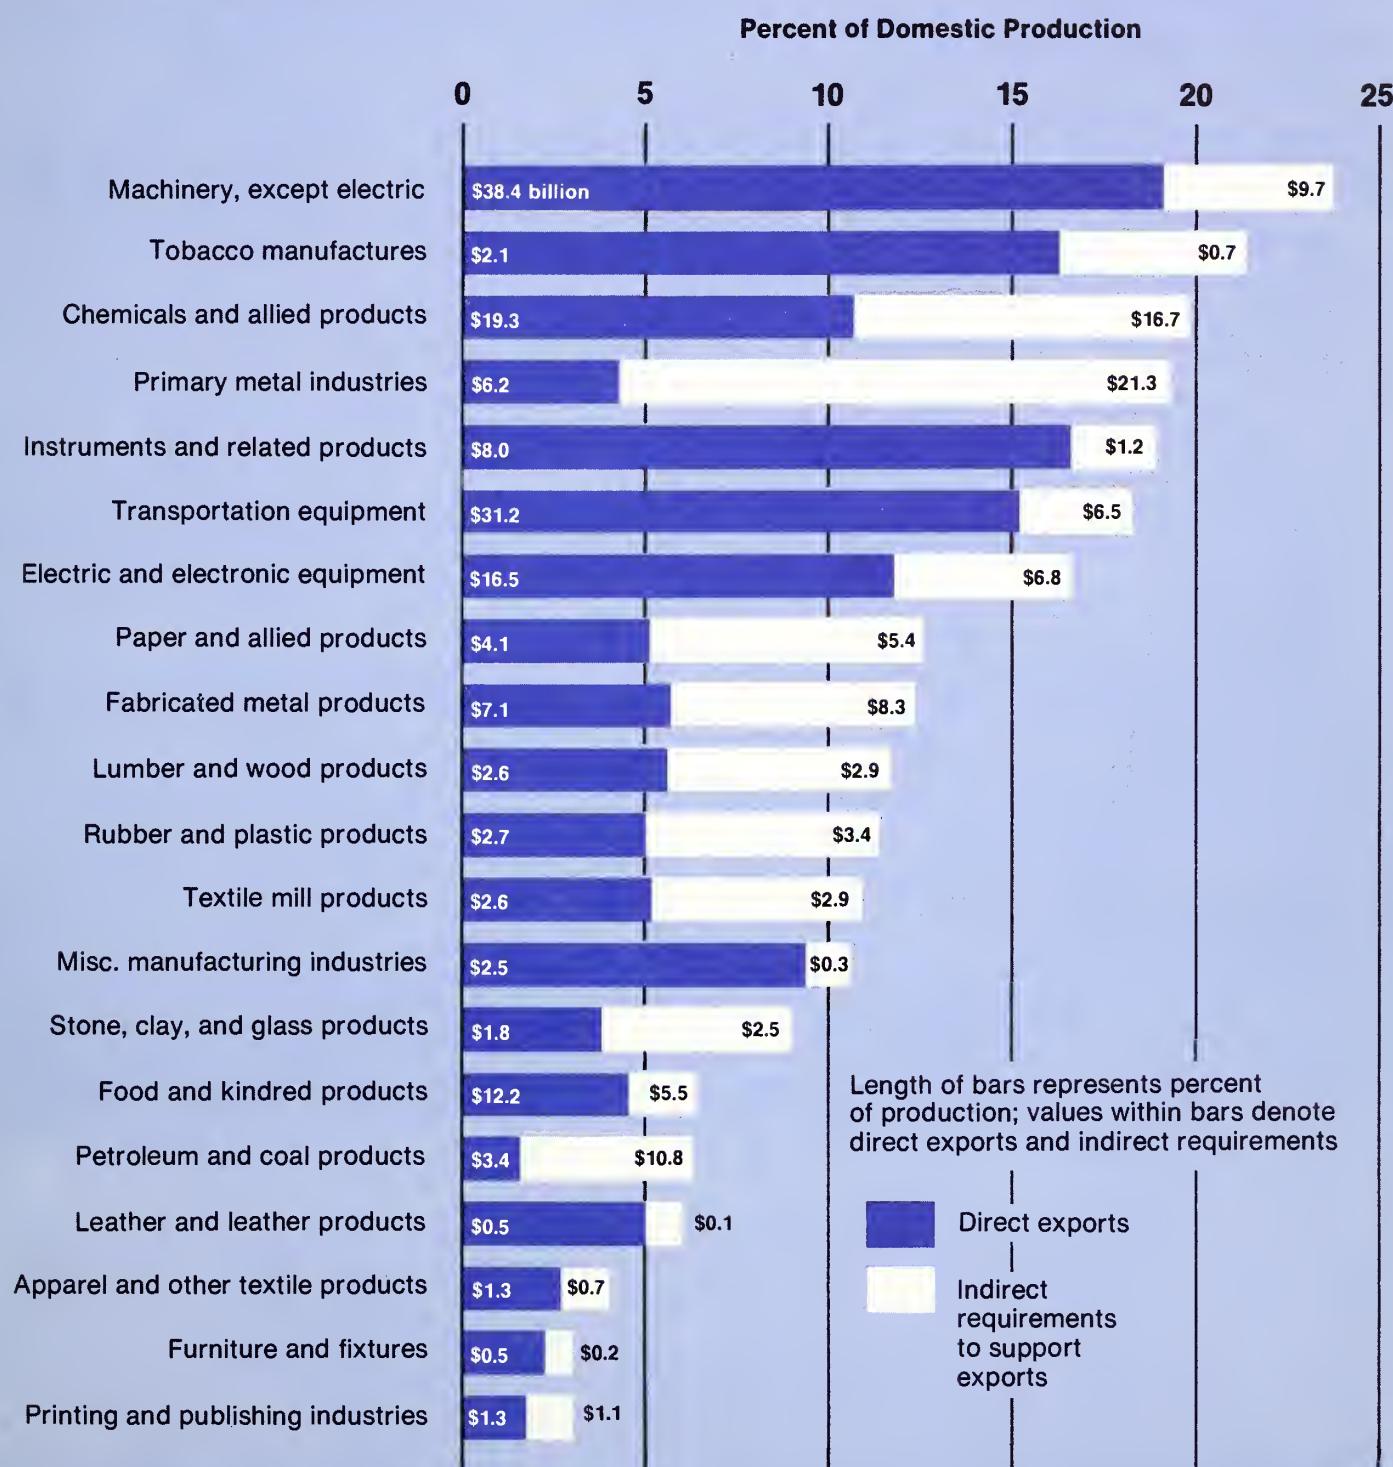

United States Export-Related Manufactures and Employment by State.

- California, New York, Texas, Pennsylvania, and Ohio led the states with the largest number of jobs related to manufactured exports.
- Employment rates were highest in Connecticut, Washington, Ohio, and Delaware for jobs in all industries related to manufactured exports.

State	Rank as export related in 1981	Export-related manufactures				Employment for export related as percent of manufacturing employment	Total employment related to manufactured exports	
		1977 (million dollars)	1981 (million dollars)	Percent increase from 1977 to 1981	Percent of state production 1981		(thousands)	Percent of civilian employment
U.S., total	--	142,404	271,703	91	13.4	12.8	4,794.0	4.7
California	1	13,319	27,399	106	14.2	14.5	526.5	4.7
Texas	2	9,196	22,651	146	12.5	12.7	285.5	4.2
Ohio	3	11,047	18,132	64	14.8	14.7	284.0	6.2
Illinois	4	10,216	17,039	67	13.4	12.9	275.4	5.4

Exports of U.S. Manufacturing Industries Related to Domestic Production, 1981

Direct Exports and Indirect Requirements to Support Exports

Note: Percentages shown for each industry indicate the total relative impact of exports on the domestic economy, including direct exports and goods shipped from domestic establishments for use as inputs in manufactured products exported from other establishments. Such inputs are included in domestic production industry totals.

continued from page 1

impact of U.S. exports on Pennsylvania's manufacturing activity was 13.4 percent rather than the 7.1 percent attributable to direct exports as shown in table 3. Thus, of the expanded manufacturing output generated between 1977 and 1981, 18 percent—or \$1 out of every \$6—was due to export-related shipments.

Feed grains leading farm export

Pennsylvania's share of U.S. agricultural exports in FY 1982, including some manufactures of farm origin, totaled an estimated \$246 million, a 79 percent increase from the FY 1977 level. Exports of feed grains were valued at \$76 million. Foreign sales of wheat and flour, meats, dairy products and poultry registered substantial increases in FY 1982 from FY 1977 levels.

The growth in exports of agricultural products from FY 1977 to FY 1982 accounted for 10 percent of the rise in farm sales, and added substantially to the income of Pennsylvania farmers. In this period the export contribution to each dollar of the state's farm sales increased from 7 to 8 cents.

Major coal exporter

Foreign sales of coal accounted for almost all of the state's mineral exports in 1981. Bituminous coal exports, amounting to \$575 million, were two times the 1977 value. The state was the second largest exporter after West Virginia. Shipments of anthracite coal, of which Pennsylvania is the sole producer and exporter, rose from \$22 million in 1977 to \$59 million in 1981. Exports of iron and steel scrap were worth an estimated \$30 million in 1981. Zinc exports were valued at \$12 million. Small amounts of clay and ferrosilicon also were shipped to foreign markets.

Export-related employment significant

Pennsylvania's \$8.1 billion worth of manufactured

exports provided direct employment for an estimated 89,600 workers in 1981. Those jobs constituted 6.9 percent of the total manufacturing employment in the state. From 1977 to 1981, the number of workers engaged in the production of manufactures declined somewhat, while employment directly related to exports increased by 20 percent.

In addition, an estimated 81,800 jobs were required in the state to manufacture products used by other establishments in the United States as inputs for manufactures that were ultimately exported. Thus, an estimated 171,400 jobs in Pennsylvania were directly or indirectly dependent on exports of manufactured goods. This was 13.2 percent of all manufacturing employment in the state.

Half of the jobs dependent on manufactured exports were concentrated in the nonelectric machinery, primary metals, electric equipment and transportation equipment industries. These jobs accounted for one out of four jobs in the nonelectric machinery industry and one out of five jobs in the transportation, electric, and primary metals industries.

An additional 112,700 jobs were generated in nonmanufacturing industries that supply materials and services supporting manufactured exports. Pennsylvania's total employment related to manufactured exports amounted to 284,100 jobs, fourth largest among the states.

It is estimated that Pennsylvania's farm employment related to exports in 1982 amounted to 9,300 or about one out of every 12 farmers. This estimate assumes that the number of farmers dependent on exports corresponds to the ratio of exports to farm sales in the state. Depending on numerous variables, including the character of the product, mechanization, and degree of intensiveness of farming, it may somewhat understate or overstate the actual number dependent on exports.

STATE EXPORT REPORTS

This report is one of a series of 50 prepared by the Office of Trade and Industry Information /Trade Information and Analysis, International Trade Administration on exports from the individual states. Data on manufactured and agricultural exports are presented in tabular form for a series of years. In addition, recent information is included on state exports of fish, fish products, and minerals. The statistics on 1981 exports of manufactures by state were taken from *Origin of Exports of Manufactured Products, 1981 Annual Survey of Manufactures*, M81 (AS)-5, issued by the Bureau of the Census in May 1983. That publication can be ordered from the Data User Services Division, Customer

Services (Publications), Bureau of the Census, Washington, D.C. 20233, or from any U.S. Department of Commerce District Office for \$2.75 per copy. Data for earlier years were taken from similar Census reports now out of print.

The information on state shares of agricultural exports was taken from various issues of *Foreign Agricultural Trade of the United States* published by the U.S. Department of Agriculture. Special compilations on exports of minerals and fuels by state were provided by the Bureau of the Mines, U.S. Department of Interior, and by the Energy Information Administration, U.S. Department of Energy, and on fish and fishery products by National Oceanic and Atmospheric Administration, U.S. Department of Commerce.
